

PRODUCT PERFORMANCE

This unique blend of acids and natural concrete solvents, **KNOCKOUT** goes to work immediately to remove concrete, cement or shotcrete buildup from any surface. With a 1-2 punch of performance and safety, **KNOCKOUT** will send even the toughest deposits crashing to the mat.

For best results, **KNOCKOUT** is foamed onto the surfaces that require cleaning, allowing the product to cling to the surface and giving it maximum contact time. After 15-20 minutes of activity, rinse the treated areas with water to expose the clean surface. Thicker deposits may require some scrubbing or a second round for full removal.

For exceptionally heavy deposits customers have the option to use **KNOCKOUT HW** for a faster, more aggressive clean.

KNOCKOUT HW is a concentrated formulation of the **KNOCKOUT** blend, using the same proprietary mixture of high-performance chemistries for those heavy-weight bouts.

KNOCKOUT HW is best applied as a foam to maximize contact time. After 15-20 minutes, rinse all surfaces with water.

HEALTH, SAFETY & ENVIRONMENT

- Non-toxic
- Low aquatic toxicity rating
- Readily biodegradable
- Non-corrosive to equipment

BENEFITS

- Significantly reduces the costs and time associated with the cleanup of cured concrete and shotcrete on equipment, tools, vehicles and structures
- Will not harm painted surfaces
- Safer than other commonly used concrete dissolvers
