

Leviat Continuing Education Series

ENGINEERED SOLUTIONS

Advanced Precast Anchor Channel Connections

Anchor channels have become a widely used solution in precast concrete members to provide a high level of adjustability while maintaining structural reliability.

This presentation will outline the many benefits of using anchor channels in modern precast construction, highlighting typical applications and providing a high-level overview of the ICC methodology currently used to design anchor channels.

An introduction to Leviat's free downloadable software for the integration of anchor channels into precast projects is also provided.

Though this presentation has not been accredited as a formal continuing education unit by any governing body, it may qualify for up to one (1) hour of professional development activity for attendees. Please consult your local and state administrative regulations for more details.

For more information on this session and other courses offered by Leviat, please contact Chris Hurd, Leviat's Technical Services Engineering Manager for North America, by email at chris.hurd@leviat.us or by phone at (210) 585-9342.
