

Leviat Continuing Education Series

ENGINEERED SOLUTIONS

Structural Thermal Breaks

The Green Building movement is gaining momentum worldwide, resulting in stricter regulations regarding the energy-efficiency of structures of all types. Conventional construction methods aren't always able to meet these demands, and more innovative and thermally efficient building products are often required.

This presentation focuses specifically on thermal bridging, how it affects the overall efficiency of a building, and how it can be effectively addressed with Leviat's HIT system.

Though this presentation has not been accredited as a formal continuing education unit by any governing body, it may qualify for up to one (1) hour of professional development activity for attendees. Please consult your local and state administrative regulations for more details.

For more information on this session and other courses offered by Leviat, please contact Chris Hurd, Leviat's Technical Services Engineering Manager for North America, by email at chris.hurd@leviat.us or by phone at (210) 585-9342.
